

BEACHCOMBER

# Built for Life

*Keith and Judy Scott, Founders of Beachcomber Hot Tubs*

There are many aspects to the structure and engineering that goes into a Beachcomber Hot Tub. When Keith and Judy Scott started Beachcomber in 1978, their passion for excellence was influenced by high end-automobiles, and quality furniture and appliances. Now, 30 years later, we still build our hot tubs with their principles that they infused into their young company. Like our I-Beam Seat Supports, Cabinetry Shims and Braces, Foundational Subframe and many others, Beachcomber is built with form, fit and function.

*Beachcomber's Perma-Seal Hot Tub foundation.*

## Perma-Seal™ Foundation

A Beachcomber Hot Tub is as beautiful right side up, as it is upside down. If you were to turn your Beachcomber upside down, you would find our Perma-Seal Foundation. This specially built, durable ABS plastic 'bottom cap' is our way of finishing off your hot tub, to make your hot tub a thing of beauty and to perform for years to come. Perma-Seal keeps rodents and insects out and seals your hot tub for life.

## Free Hot Tub Information and Education

# Time-proven, engineered quality, renowned world-wide for 30 years.

## Structure Built to Last

What is structure, and why is it important? When you think of it, Beachcomber's 750 hot tub filled with water can weigh as much as your car. That is a lot of water held by this vessel and it needs to be built right. That is why we back every Beachcomber Hot Tub with 7 to 10 coats of liquid fiberglass, with our own formulation of Glassloc 2000 bonding material between the shell and the fiberglass. These layers are immediately hand rolled right after application to ensure an air tight, sealed bond. Once the curing process is complete in our factory assembly line, the structure of the hot tub is built to last. And with contoured, rounded seating, structural integrity is maximized to last a lifetime.

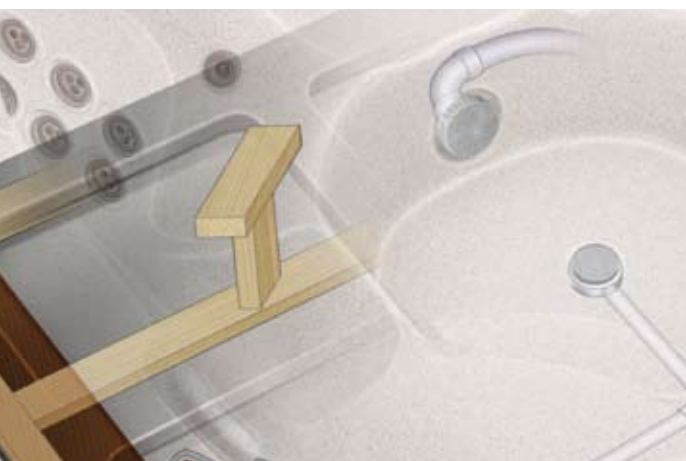

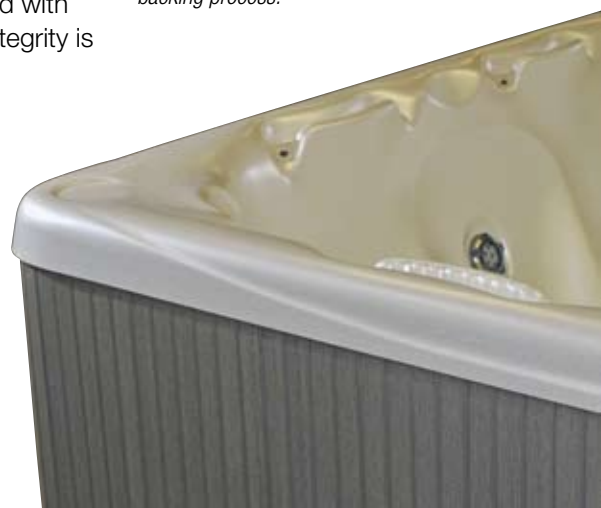

*Beachcomber's 750 Model weighs over 1,800 Kgs when filled, the average weight of a car.*

*Beachcomber's hand rolled backing process.*

## Wide Rolled Lip Design for Ease and Safety

Our trademark Wide Rolled Lip design is well made, unique and completely functional. With integrated body molded hand grips, it looks beautiful and allows you to enjoy your hot tub with ease and safety. Our lip design enhances proper structure and at the same time maximizes usability and space inside for people. When it rains, our lip design repels water away from the cabinetry to run down the vertical slats in our tongue and groove Enviroskirt and away from the hot tub.

## I-Beam Seat Support

We take that extra step. A lot of manufacturers cut corners in production to save costs, increase profits and build quicker. Beachcomber has the slowest production line found anywhere. Why? Because we truly believe that a hot tub should be built to last. We know that when our hot tub arrives at your home, the true test of our engineering begins. We want your experience to be the best, so that you will refer your friends. Our I-Beam Supports beneath each seat proves our commitment to quality of structure, because you deserve the best.
