FOR IMMEDIATE RELEASE:

BEACHCOMBER HOT TUBS RELEASES NEW SOUND SYSTEM

March 9, 2001, Surrey BC – Beachcomber Hot Tubs announced their new hot tub sound system, The Aquacoustics™ Surround Sound System.

Premiered at the NSPI Show in Orlando, Aquacoustics™ became one of Beachcomber's most successful launches ever, with people lined up to listen to the new system. The design is understated and does not change the appearance of the tub, with the exception of a small window that shows the display of the CD player. The door that offers access to the system includes recessed hinges, a hand held remote control unit, detachable faceplate and locking door for security.

"What really makes this unit unique is the way sound is generated. The shell of the hot tub becomes the speaker." Says Beachcomber's Marketing Manager, Lyndon Throness.

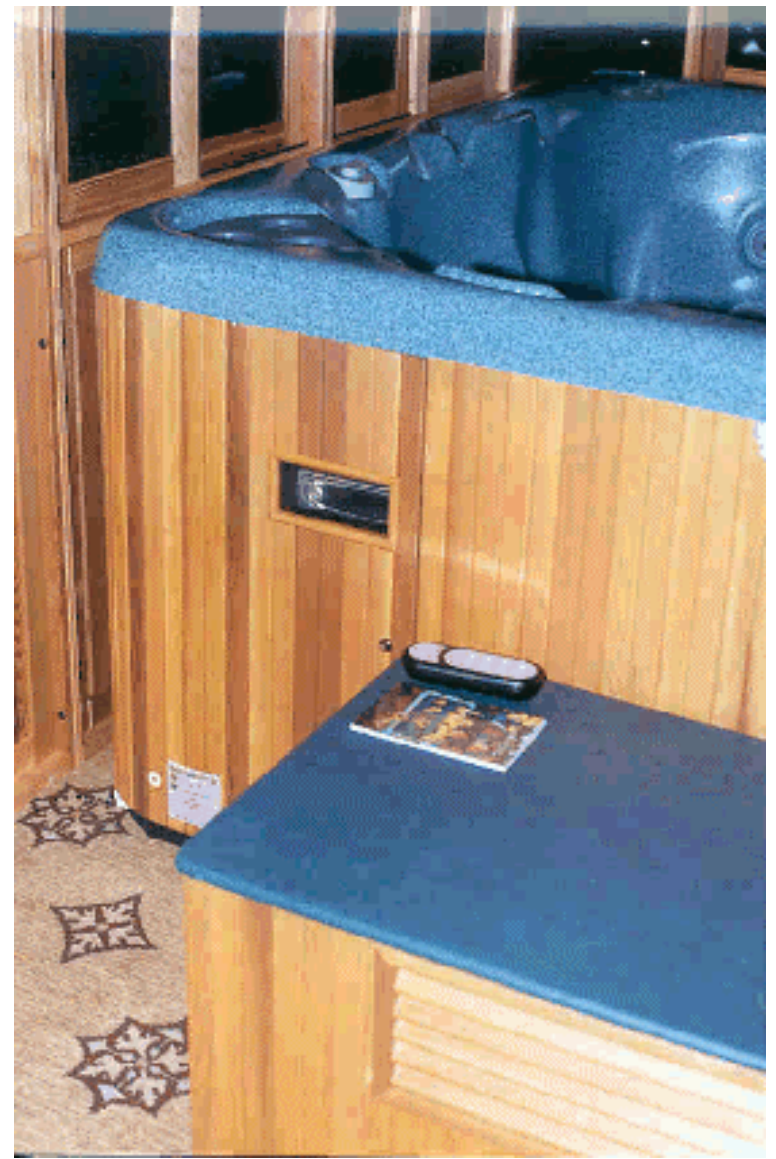

"You don't just hear the music, you feel the music." Changes to the hot tub are all internal, leaving external devices, like the hot tub cover and accessories unchanged.

Aquacoustics™ is just one of the many innovations made to Beachcomber's 2001 lineup.
